PROFESSIONAL SUMMARY

Senior Software Engineer with 6 years of experience designing and building scalable web applications using Node.js and Angular. Skilled in developing high-performance APIs, implementing microservices architecture, and delivering efficient, user-centric solutions.

SKILLS

- **Languages:** JavaScript, Golang, Python
- **Technologies and Frameworks:** Vue.js, Express.js, Node.js, Nest.js, Angular, REST API, Golang, Gin Web Framework, Goroutines, GRPC, BDD, TDD, Docker, CI/CD Pipelines, Amazon ECR, Kubernetes, EdgeDB, Vuetify, Vuex, MySQL, HTML, CSS, Webpack, REST, WordPress, Agile Methodology, Microservice Architecture.
- **Developer Tools:** GIT, JIRA, Postman

EXPERIENCE

Senior Software Engineer

November 2024 - Present

Way.com

Kerala, India

- Designed and scaled SaaS applications using NestJS monorepo architecture, reducing development overhead and improving team productivity.
- Conducted rigorous code reviews, improving code quality and reducing production issues.
- Developed high-performance REST APIs handling concurrent requests with optimized response times.
- Integrated Stripe for payments, automating billing workflows and ensuring reliable transaction processing.
- Led the architecture of an admin panel used for managing core business operations.
- Built responsive frontend components using AngularJS with strong backend integration.

Senior Engineer

June 2024 - November 2024

CareStack (Good Methods Software Solutions)

Kerala, India

- Conducted **code reviews** and enforced engineering best practices, improving code quality, consistency, and maintainability across projects.
- Contributed as a **core team member** in building scalable software solutions, mentoring developers and driving successful project delivery.
- Managed and guided a team in developing **backend services for mobile applications**, ensuring robust and efficient implementations.
- Optimized **API performance and database queries**, reducing response times and improving scalability for high-traffic systems.
- Collaborated with **frontend, QA, and DevOps teams** to streamline deployment pipelines and accelerate release cycles.

- Implemented robust error handling, logging, and monitoring solutions, improving system reliability and reducing production issues.

Software Developer
Alokin Software Pvt Ltd.

May 2020 - May 2024
Kerala, India

- Designed and developed **RESTful APIs** using Node.js, enabling scalable and reliable backend services.
- Implemented **microservices architecture** with efficient inter-service communication using REST APIs.
- Built responsive and user-friendly web applications using **Vue.js**, ensuring seamless user experience.
- Set up and maintained **CI/CD pipelines using GitHub Actions**, improving deployment efficiency and release consistency.
- Containerized applications using **Docker**, enabling consistent deployments across multiple environments.
- Optimized **database queries and indexing strategies**, improving application performance by **55%**.
- Collaborated within a **10-member cross-functional team** to build scalable frontend and backend applications.
- Conducted **code reviews**, authored technical documentation, and mentored team members to improve overall engineering quality.
- Diagnosed and resolved **complex backend issues**, ensuring system stability and minimal downtime.
- Followed **Agile (SAFe) methodologies**, contributing to efficient sprint execution and timely project delivery.

PROJECTS

Repair and Maintenance SaaS — Node.js, NestJS, AngularJS

- Designed and developed a **multi-tenant SaaS platform** for repair and maintenance workshops, supporting job tracking, invoicing, customer management, and inventory operations.
- Architected and implemented **event-driven communication using Server-Sent Events (SSE)**, enabling real-time updates across web and mobile applications.
- Built **data synchronization mechanisms** across multiple tenant instances, ensuring consistency and reliability in distributed environments.
- Developed and integrated an inventory management module, improving operational tracking and resource management.
- Optimized backend services for **scalability and high performance**, ensuring seamless operation across multiple clients and high-traffic scenarios.

CSIQ Web App — Node.js and PHP

- Maintained and enhanced APIs for the CSIQ telecalling app, ensuring seamless integration and performance.
- Optimized and refactored code to improve scalability and efficiency across the application.
- Redesigned existing endpoints to adhere to RESTful API standards, improving consistency and usability.

Pixely — Golang, EdgeDB

- Designed and implemented APIs for a photobooth product.
- Integrated GoLang APIs seamlessly with **EdgeDB database**, ensuring data consistency and reliability.
- Enhanced performance by 40% by developing high-performance endpoints using **Goroutines**.
- Developed packages to enhance code modularity and maintainability.

- Implemented middleware functions for authentication, logging, and request handling within the Gin framework, ensuring security and scalability of APIs while adhering to industry best practices.
- Implemented asynchronous tasks using goroutines to handle concurrent operations such as database queries, network requests, and data processing, enhancing API responsiveness and scalability.

Hummingbird Property Management System — Node.js, Vue.js, MySQL

- Designed and implemented Node.js APIs for a Real Estate Domain Web App in the Self Storage industry across 2 countries.
- Spearheaded the development and successful integration of a Vue.js - powered **CMS web application as webpack**, streamlining the content management process and reducing publication time by 50% for Storagefront, Storelocal and Mariposa.
- Enhanced performance by 40% by developing high-performance endpoints using **asynchronous approach**.
- Developed **reusable Vue.js components** to enhance code modularity and maintainability.
- Implemented features such as On-boarding flow, **Event bus communications** etc. using Express.js and MySQL.
- Contributed to the development of user-friendly and reusable components within the **Aviary Design System** for the Hummingbird Property Management System.
- Developed optimized **RESTful API endpoints** in Node.js, implementing robust authorization for secure resource access, conducting thorough **JOI validations** to enhance data integrity, and adhering to best practices for coding, documentation, and testing.
- Collaborated with **third-party integrators** to seamlessly integrate features into the Property Management System, overseeing planning, development, and conducting code reviews to ensure quality implementation.

Nectar Console Web Application — Vue.js

- Guided on creating a **user-friendly web application** to facilitate API endpoint testing from the front end, resulting in a 20% reduction in testing time.
- Integrated third-party packages, including CodeMirror and AG Grid, enhancing application functionality by 30%.
- Collaborated with cross-functional teams, ensuring seamless integration and delivery of features on time, contributing to a 15% improvement in overall project efficiency.

EDUCATION

Bachelor of Technology, APJ Abdul Kalam Technological University, Kerala, India
Relevant Coursework: Computer Science and Engineering.

2015 - 2019

CERTIFICATIONS

-
- **Certified SAFe 6 Practitioner** (valid until February 2024), with expertise in Agile methodologies, Lean practices, and the Scaled Agile Framework (SAFe). [View Credential](#)
 - **HIPAA Associate (HIPAAA)** (Valid until June 2026) — Certified by CareStack™ - Dental Practice Management. Demonstrated proficiency in U.S. Health Insurance Portability and Accountability Act (HIPAA) compliance, ensuring data privacy, security, and regulatory adherence in healthcare software environments.
 - **Introduction to Generative AI** — Issued by Google in August 2025 (Credential ID: 17410689). Gained foundational understanding of Generative AI concepts, applications, and ethical considerations in modern AI systems.
