PROFESSIONAL SUMMARY

Senior Software Engineer with 6.5+ years of experience architecting distributed backend services, multi-tenant SaaS platforms, and event-driven architectures using TypeScript (Node.js/NestJS), Golang, and Python. Proven track record in high-concurrency systems, queue-based pipelines (Celery/Redis), and database optimization. Experienced technical lead adept at driving system design, mentoring mid-level engineers, and cutting production incidents across high-scale products.

SKILLS

- **Languages:** JavaScript, TypeScript, Golang, Python, HTML, CSS
- **Backend:** Node.js, NestJS, Express.js, Gin, Celery (async task queues), Microservices, Event-Driven Architecture, Server-Sent Events, Multi-Tenant Architecture, REST APIs, gRPC, Goroutines
- **Frontend:** Angular, Vue.js, Vuex, Vuetify, Webpack
- **Databases and Caching:** MySQL, EdgeDB, Redis
- **DevOps and Tools:** Docker, Kubernetes, Amazon ECR, GitHub Actions (CI/CD), Git, Jira, Postman
- **Practices:** TDD, BDD, Agile/SAFe, Code Review, Estimation and Planning, AI-Assisted Development (Claude), Technical Documentation

EXPERIENCE

Senior Software Engineer
Way.com

November 2024 - Present
Kerala, India

- Built a **SaaS platform for auto repair shops** in a **NestJS monorepo**, sharing modules across services to cut duplicated code and speed up feature delivery.
- Led the architecture of an **admin panel** that lets the business control and manage all shops on the platform.
- Built an **OEM data access tool** that delivers vehicle data for all vehicles to shops and internal teams.
- Architected an asynchronous vehicle data pipeline utilizing Python, Celery, and Redis brokers; decoupled request ingestion from downstream processing with automated retries and dead-letter queues, sustaining 10k+ concurrent requests with 99.9% delivery reliability.
- Built a **data migration pipeline** that extracts shop data from legacy software through its APIs, transforms it to JSON, and loads it into the database with scripts, with **rollback support**; paired with a **seamless onboarding flow** for new shops.
- Engineered high-throughput backend services (REST APIs among them) with **Redis caching** and tuned data access paths, so a large number of customers and repair orders are processed without delays.
- Built Angular front-end components with tight backend integration.
- Mentored a **team of 5 engineers** and ran rigorous **code reviews**, raising code quality and reducing production issues.
- Used **Claude for AI-assisted development** to speed up delivery and to prepare accurate **project estimates**.

Senior Engineer

CareStack (Good Methods Software Solutions)

June 2024 - November 2024

Kerala, India

- Led a team building **backend services for mobile applications**, and mentored developers through delivery.
- Optimized **API performance and database queries**, reducing response times for high-traffic systems.
- Added error handling, logging, and monitoring that improved reliability and reduced production incidents.
- Worked with frontend, QA, and DevOps teams to streamline deployment pipelines and speed up releases.
- Enforced engineering best practices through **code reviews**, improving consistency and maintainability.

Software Developer

Alokin Software Pvt Ltd.

May 2020 - May 2024

Kerala, India

- Designed and built Node.js and Express.js backend services within a **microservices architecture**, with REST-based inter-service communication.
- Optimized **MySQL** performance through query tuning and **indexing strategy**, improving application performance by **55%**.
- Built component-driven **Vue.js** front ends with **Vuex** state management and **Vuetify**, bundled with **Webpack**.
- Set up and maintained **CI/CD pipelines on GitHub Actions**, automating build and deployment workflows for consistent, repeatable releases.
- Containerized services with **Docker** to keep environments identical across development, staging, and production.
- Performed root-cause analysis on complex backend issues, restoring system stability with minimal downtime.
- Delivered in a **10-member cross-functional team** under Agile (SAFe), running code reviews, writing technical documentation, and mentoring teammates.

PROJECTS

Auto Repair SaaS Platform

Node.js, NestJS, Angular

- Designed a **multi-tenant SaaS platform** for auto repair shops covering job tracking, invoicing, customer management, and inventory.
- Implemented **real-time updates with Server-Sent Events** across web and mobile clients.
- Built **data synchronization** across tenant instances, and a rollback-safe **data migration** flow that pulls records from existing shop software via APIs, converts them to JSON, and bulk-loads them with scripts.
- Created a smooth shop **onboarding flow** and an **admin panel** to control all shops from one place.
- Optimized backend services so large volumes of customers and repair orders are processed without delay.

OEM Vehicle Data Platform

Python, Celery, Redis, Node.js, NestJS

- Built an **OEM data access tool** that delivers data for all vehicles through a single interface.
- Designed a **request-processing pipeline on Celery workers** with **Redis as the message broker**: requests are queued and processed asynchronously, so the API stays responsive while heavy data lookups run in the background.
- Configured **task retries** for fault tolerance and used **queue-based load leveling** to absorb bursts of user requests without overloading the system.
- Added **Redis caching** for frequently requested vehicle data, cutting repeated lookups and improving response times.

Hummingbird Property Management System

Node.js, Vue.js, MySQL

- Built Node.js/Express APIs for a self-storage real estate platform operating in 2 countries, with authorization, **Joi validation**, tests, and documentation.
- Led a Vue.js **CMS delivered as a Webpack module**, cutting publication time by **50%** for Storagefront, Storelocal, and Mariposa.
- Improved endpoint performance by **40%** through an asynchronous approach.
- Built onboarding flows and event-bus communication, and contributed reusable components to the **Aviary Design System**.
- Coordinated **third-party integrators**, from planning through code review.

Pixely (Photobooth Platform)

Golang, Gin, EdgeDB

- Designed Go APIs integrated with **EdgeDB**, and improved performance by **40%** using goroutines for concurrent queries, network calls, and data processing.
- Wrote Gin middleware for authentication, logging, and request handling, and built reusable packages for modularity.

Nectar Console

Vue.js

- Guided the build of a web app for testing API endpoints from the front end, cutting testing time by **20%**.
- Integrated CodeMirror and AG Grid, and collaborated across teams to deliver on schedule.

CSIQ Telecalling Web App

Node.js, PHP

- Maintained and refactored APIs, and redesigned endpoints to follow RESTful standards for consistency and scalability.

EDUCATION

B.Tech, Computer Science and Engineering, APJ Abdul Kalam Technological University, Kerala, India 2015 - 2019

CERTIFICATIONS

- **Introduction to Generative AI**, Google (August 2025), Credential ID 17410689.
- **Certified SAFe 6 Practitioner** (valid until February 2024), Scaled Agile. [View Credential](#)
- **HIPAA Associate (HIPAAA)** (valid until June 2026), CareStack. Covers HIPAA compliance, data privacy, and security in healthcare software.

AWARDS

- **Wayfarer of the Quarter, Q2 2026** June 2026
Issued by Way.com, India. Recognized for outstanding contributions to the team.
- **Spotlight Star Award** December 2025
Issued by Way.com, India. Recognized for outstanding contributions.
